

SUSTAINABITE

Team: Greenify

From Waste to Wonder

- The food-service industry alone accounts for about 2.2 million ton of edible food waste each year.
- Meanwhile, 2021 National Student Food Insecurity Report (conducted by Meal Exchange among 13 Canadian universities) found that **56.8%** of students surveyed were moderately or severely food insecure

Our Solution -- SUSTAINABITE

- **User friendly**, focused on carbon footprint reduction, and built around a strong restaurant and user community
- An **AI-powered sustainability app** that bridges two extremes: food waste and food insecurity
- Helps users make the most of what's in their kitchen and connects them to restaurants offering discounted surplus meals
- Goes beyond recipe generation: understands real context such as pantry, utensils, taste, and budget
- Learns and adapts to user preferences over time to provide smarter, more personalized recommendations
- Builds a closed-loop ecosystem where users save money, restaurants reduce waste, and the planet benefits

Why should I use SUSTAINABITE?

SUSTAINBITE connects 4 unique features:

1. It learns and adapts to your unique needs and taste
2. It creates a positive feedback loop of sustainability practice between people and the restaurants
3. It promotes healthy and affordable eating
4. It ranks the recipes based on carbon-foot-print

How can I use SUSTAINABITE?

1. UPLOADING A PHOTO FROM EITHER PANTRY OR THE FRIDGE
2. ADDING THE KITCHEN APPLIANCES AND COOKING SKILLS
3. FOLLOW THE GENERATED RECIPE
4. ENJOY

DEMO

SUSTAINBITE

START: 'What do I
actually have ?'

END: 'What can I
make that is
sustainable
and affordable?'

AI Behind It

- Image ingredient recognizer
- Recipe generator (weights) – Carbon footprint + personalization
- Connection with restaurants
- General chat for simplification

Why We're Different

SUSTAINABILITY + AI

- **Why this matters for SDGs:**
- SDG 11: Connects local restaurants/stores to reduce community food waste
- SDG 12: Personalized zero-waste cooking at the individual level
- SDG 13: Carbon footprint transparency drives behavioral change

- **Target users :**
- Phase 1: Budget-conscious students/families (40M households in North America alone)
- Phase 2: Sustainability-conscious millennials/Gen Z
- Phase 3: Expand to food deserts, senior communities

Join our SUSTAINABITE network

- All users are a part of the ecosystem
- Partner with us
- Promote positive sustainability growth

Responsible AI implementation

- Privacy: Images processed, not stored permanently
- Inclusivity: Works for various budgets, dietary restrictions, cultural cuisines
- Transparency: Shows why recipes are recommended (nutrition, cost, carbon)
- Accessibility: Visual-first interface (WCAG compliant), multilingual

Future Developments

- *Restaurant Community Network*
- *Deep Personalization*
- *Engagement & Smart Features*
- *The businesses can promote to promote sustainability*
- *Gamifying SUSTAINABITE to include carbon-foot-print leader board.*

IMPACT (CLOSING STATISTICS !)

- ❑ A person could save ~1.85Kg of carbon in a meal by using SUSTAINABITE
- ❑ If 100 people use it for a meal/day for a month they could save 5,550 kg of CO₂e/5.55 tonnes.
- ❑ "This is the same carbon footprint as **canceling 3 round-trip flights from New York to London.**"

"Imagine a world where no food goes to waste, and everyone eats well, regardless of budget"
